## Experience

---

### Rubrik

July 2022 – Dec, 2025

*Software Engineer 2*

*Bengaluru*

- **Architected** frontend solutions for a large-scale **legacy-to-cloud platform** migration, delivering scalable, production-grade workflows using **React**, **TypeScript**, and **GraphQL**.
- Established frontend test coverage standards using **Jest** and **React Testing Library**, lifting Data Protection team coverage from **50% to 90%** through TDD enforcement and proactive Bug SLO monitoring using **Sentry**.
- Owned the Data Protection codebase **end-to-end**, designing for **scalability** and **reliability** across critical enterprise workflows.
- Contributed to **migrating a monolithic frontend** to a **multi-package architecture** and upgraded core libraries, including **React Router**, reducing inter-team dependency friction.
- **Integrated GenAI** coding assistants into daily work, accelerating development velocity by **2–3x** by eliminating boilerplate authoring and improving PR turnaround.
- **Platformized** the Data Protection workflow, enabling easier cross-team integration through a refactored, **modular codebase**.
- Enforced frontend best practices across the team, including **accessibility standards**, **performance optimization**, and thorough **code reviews**, maintaining high code quality across the Data Protection codebase.

### Sprinkle Data

June 2019 – June 2022

*Software Engineer*

*Bengaluru*

- Introduced **React Query** for server-state management, **improving data synchronization** and reducing redundant API calls.
- Contributed to **migration** of legacy jQuery application to React, **enhancing scalability and modularity**.
- Built interactive dashboards using **React and Google Charts**, enabling real-time visualization of business metrics.
- Designed and delivered end-to-end Billing module (**Java + MSSQL backend, React frontend**), owning feature development from concept to production.
- Modernized legacy components using **React Hooks** and **mentored 3 frontend engineers** through code reviews and best practice enforcement.
- Worked on the Product Control team, responsible for **UI visualizations** and building **REST APIs** in the backend.

## Projects

---

### UGC (User-Generated Content) Generator

- A platform where users can generate UGC (user-generated content) content, manage their creations, browse community content, and choose subscription plans—similar to AI-powered content creation tools.
- Used **React**, **Typescript** and **Tailwind CSS** for frontend of the product.

## Technical Skills

---

**Languages:** JavaScript (ES6+), TypeScript, Java(Beginner), Python(Beginner), HTML5, CSS3

**Frontend Frameworks and Libraries:** ReactJS(Expoert), Redux, React Hooks, React Router, React Query/Tanstackquery, NextJs, Tailwind CSS, React Testing Library, Jest

**Tools:** Github, Vite, Webpack, GraphQL, Test driven Development, Agile, CI/CD, Clean Code

## Education

---

### Lovely Prof. University

2016 – 2020

*Bachelor of Engineering, Computer Science and Engineering*

*Jalandhar*

## Certificate and Achievements

---

- **Frontend Masters, React State Management**
- **Codechef certified Data Structure and Algorithm Program**
- **Won HackUMask Hackathon conducted by Hackerearth in LPU.**
